

Choose between 2 different flow restrictor sizes

How about comfort? Is it the same even when we use less water?

At the heart of ecoBETA's intelligent water saving system is the small, specially developed watersaving inserts that can be easily fitted into all types of taps, faucets and showers, ensuring an optimal flow of water. Due to the intelligent design and special shape of the inserts, there is no loss of comfort.

The ingenious design of the inserts is provided with pressure compensation, which ensures a constant water flow regardless of the water pressure.

At a pressure of 0 bar, the O-ring will not be affected. But as pressure increases, the O-ring is compressed at the core, so the passageway is restricted. This continues as pressure increases.

Products fulfill the EN 246 standard.
