Subject: Successful Pilot Project in the City of Sharjah - UAE

Meet Environmental Solutions in collaboration with ecoBETA have performed a water conservation pilot project for the Nasiria municipality building in Sharjah, UAE in 2015.

The project involved monitoring the daily water consumption in the government building for a period of 4 months starting from October 2014, then applying water consumption management program starting with the installation of water conservation devices throughout the whole building.

The results were remarkable and the overall savings achieved were 49.7% on water consumption. The return on investment for this project is 2.4 months. A follow up visit by MEET Technical Team in June 2015 confirmed no damage to any of the water saving devices. Furthermore, SEWA have not received any complaints for the water saving devices so the overall comfort factor is very high.

SEWA hereby confirms that the project was successfully conducted and the purpose to achieve water savings in public & government buildings was met and to be expanded in the near future to cover more commercial and industrial buildings in addition to domestic households.

Thanks to MEET Environmental Solutions & ecoBETA for their valuable input and great efforts with SEWA in this pilot and providing the water saving devices and technical support.
